

Luminos 4

Highly effective fly control for ultimate protection

Luminos 4 has been developed to deliver highly effective fly control in areas where there is very low tolerance to flying insects. Luminos 4 would be suitable for businesses such as food processing companies, the pharmaceutical industry and other general industrial sites.

Luminos 4 uses unique encapsulation technology developed by Rentokil. This approach to fly control works by trapping insects on an adhesive film that runs behind the four 15W UV-A lamps. The adhesive film automatically winds on and the insects are encapsulated within the film. As a result, the risk of contamination from dead insects is minimised.

The unit is one of the most effective industrial fly killers and offers the option for fly count and analysis of insects captured. Luminos 4 is available in three variants: wall mounted, double sided (suspended) and an IP65 version.

Luminos 4: Benefits to your business

- Ultimate protection – large catch area with high UV output to ensure that insects are caught quickly.
- Total encapsulation – reduces the risk of contamination from flying insects and the fragmentation or 'blow out' of dead insects.
- Eliminates risks of secondary infestation – fresh adhesive film that automatically winds on.
- Highly effective against all types of flying insects – flying insects are not a nuisance.
- Peace of mind – fulfils legal and health and safety requirements.
- Safe and effective – in the most sensitive areas.
- Supplied ready to use – 4x15W lamps and adhesive film.
- Automatic wind on adhesive film – can be set at different intervals to manage risks of contamination.

Luminos 4

Suitable for a range of customers, including:

- Clean room facilities
- Commercial kitchens
- Food processing
- Pharmaceutical
- General industrial sites

Luminos 4

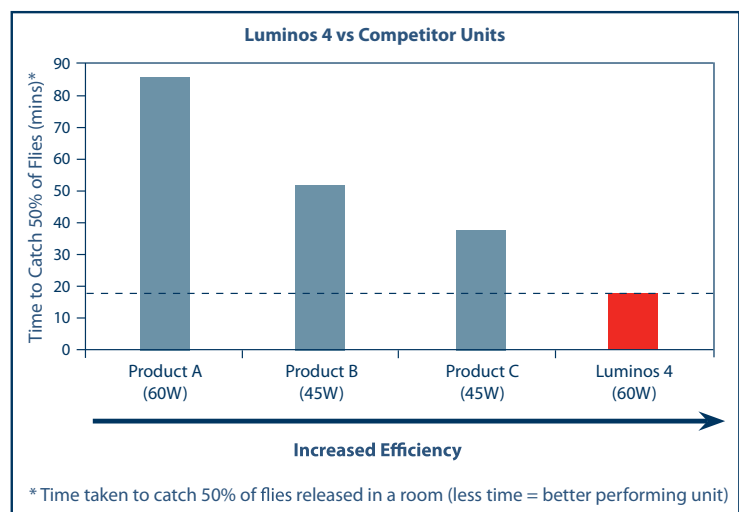

Highly effective fly control for ultimate protection

Unique technology, ultimate protection

In a series of tests designed to compare the effectiveness of various fly killers suitable for high risk areas, Luminos 4 outperformed many of the leading products currently available on the market.

The graph opposite reflects the calculated "Half Life Time" for a series of products. This test measures how quickly a unit catches 50% of flies in an area, and uses this as a proxy for overall effectiveness. For further information on half life measurement, please visit our website:

Technical specification

Luminos 4 conforms to all relevant European electrical and UV safety standards.

To ensure optimum performance the unit should be professionally serviced by your Rentokil Technician. The lamps should be replaced annually at the beginning of the fly season.

Luminos 4	
Dimensions (H,W,D)	630mm x 153mm x 550mm
Weight	8.1g (Unboxed)
Lamp	4 x 15W 18 inch T8 BL350 GE
Electrical Supply	200-240V / 50-60Hz
Mounting	Wall mounted
Material	Chassis – Aluminium Cover – ABS
Guarantee	2 years

With more than 550 technicians across the country, we are always local to you. Contact us and we'll advise you about fly control for your business.
