Rentokil Bird Netting Case Study

Rentokil successfully netted off a large plant area on top of an office building roof, in order to prevent pigeons from roosting in, and fouling on, the vital environmental control systems.

Rentokil Netting system

The Problem

Mr Jeremy Broome is the building FM manager for an office building in the Temple Quay area of Bristol. One of Mr Broome's responsibilities is to maintain pest free conditions within common areas of the property, including receptions, car parks and building plant areas.

After a colony of pigeons set up home within the roof plant area, which houses the equipment that maintains the buildings environmental conditions, Mr Broome had to take action to ensure that there were no health and safety or environmental risks which would prevent the regular critical maintenance of this equipment.

If this essential maintenance could not be completed, due to the presence of pigeons and associated droppings, then this could have led to equipment failure. This would have resulted in a loss of building environmental conditions, leading to tenant complaints and breach of the contract with the building owners, potentially resulting in financial penalties and loss of reputation.

Rentokil's Solution

Rentokil was the first company that Mr Broome contacted for a solution, as he already contracted the company for other pest control services and was very happy with the service they provided.

The solution that Rentokil implemented was to completely net off all of the plant equipment on top of the roof to prevent pigeons from accessing, and fouling in, this vital area.

Rentokil use dedicated and experienced technicians to complete their bird netting work, as it's critical that netting is installed correctly to ensure that it is safe and effective for many years of varying environmental conditions, especially from high winds and heavy rain.

Customer Benefit

The netting that Rentokil installed came with a five year guarantee on fixtures and fittings, ensuring peace of mind for Mr Broome, who commented on the job, "Our primary concern for the Health and Safety of engineers and the working operation of the roof plant equipment has been addressed now that we don't have any further issues with pigeons". Mr Broome continued by stating, "We would highly recommend Rentokil for their professional approach to the installation of effective bird control systems".

Mr Broome
FM Building Manager

"Rentokil were very professional in their approach to our problem. Since the net was installed we've had no further issues with pigeons in the immediate area".

The Experts in Pest Control

- Operating in over 50 countries
- Providing effective protection and peace of mind
- With expert knowledge of over 250 pests
- With over 85 years of pest control experience
- Safeguarding your reputation
- Reducing your time, effort and stress
