

Rentokil

The Experts in Pest Control

Flexi Armour Dock

One of the most effective proofing solutions for dock levellers

Dock levellers are a convenient and fast way of loading and unloading freight from vehicles, but gaps around them offer pests an entry point into your facilities, increasing the risk of pest infestations in your logistics chain. These gaps also allow food and other waste material to drop down into the dock, which provide rodents with ideal feeding and nesting material.

The solution? A revolutionary proofing method that provides a bespoke solution for every dock leveller on your site.

- **Flexible solution**
A versatile solution that can be fitted to docks of different sizes
- **Easy to install** Innovative, strong, magnetic design makes it easy to install, service and clean
- **Helps prevent infestations**
Reduces the risk of rodents accessing the building from external areas of your site
- **Safe and hygienic** Doesn't impede the operation of the dock leveller and is easy to maintain
- **Why Rentokil?**
For over 85 years, Rentokil has been the market leader in pest management in the Ireland

Rentokil Flexi Armour Dock* is the most advanced proofing solution for closing the gaps around dock levellers, which are a major entry point for rodents. It's made from hard wearing Kevlar and steel mesh, making it twice as hard for rodents to gnaw through. Alongside this, the softer proofing material fills up the gaps and allows for dock-leveller movement.

Rentokil UK's recent analysis of data from our connected technology reveals that approximately 30% of infestations originate from the loading areas of warehouses, supermarkets and distribution centres. Proofing these gaps is essential to minimise the risk of rodent activity inside your buildings.

By sealing the gaps, the Flexi Armour Dock:

keeps rodents and other pests out of your facility

prevents waste material accumulating in the dock

reduces pollutants entering into your facility and reduces drafts
